

## Biotinylated Lipopolysaccharide from *E. Coli* O111:B4

Catalog # 6108

*For Research Use Only - Not Human or Therapeutic Use*

DESCRIPTION:	<p>Biotinylated Lipopolysaccharide (LPS) from <i>E. Coli</i> O111:B4</p> <p>Lipopolysaccharide (LPS), also known as endotoxin, is the major structural component of the outer membrane of gram-negative bacteria. This glycolipid stimulates the host immune system and plays pathological roles in inflammatory diseases such as bacterial sepsis, inflammatory bowel disorders, lung disease, periodontal disease, and asthma (1-4).</p>
APPLICATION:	<p>To facilitate studies on host recognition of LPS, a biotinylated LPS and a streptavidin conjugated probe (enzyme or fluorochrome) can be used for identifying LPS ligands in many applications such as: enzyme immunoassay, western blot, flow cytometry, and fluorescence microscopy (5). In addition, LPS ligand interactions can be evaluated in a pull-down assay as demonstrated with HMGB1: a late stage mediator of endotoxin shock (6). Chondrex, Inc. also provides purified bovine HMGB1 for use as a positive control for these LPS binding assays (Cat # <a href="#">9050</a>).</p>
QUANTITY:	0.1 mg
FORM:	Lyophilized powder
SOURCE:	<i>E. Coli</i> O111:B4
STORAGE:	-20°C
STABILITY:	2 years
NOTES:	N/A
