

Extracellular Matrix Analysis

Connective tissue is composed of cells surrounded by the extracellular matrix (ECM), a complex mixture of collagens and glycosaminoglycans (GAGs). Collagen, the most abundant protein family in connective tissues, plays a critical role in forming the ECM. Chondrex, Inc. provides the following flow chart to aid researchers in choosing the appropriate kits for ECM and collagen analysis.

Kit Selection Flowchart For Analysis

*Solubilization of samples requires special attention. Please contact Chondrex, Inc. at support@chondrex.com for more information.

**9062/9062P using culture media samples will require concentrating solution (Catalog # 90626). Please contact Chondrex, Inc. at support@chondrex.com for more information.
